GID VIAL

App designed to support road
safety education

The price of greatness is responsibility, remember it when driving.

Start of the project

GID VIAL

As a result of the training we have received and the information we consulted, we were sensitized and decided to create an App to support the education and training of citizens on the subject of road safety.

Several pedagogical meetings were held on the subject of road safety and we collected information about the consequences, in our country, of a deficient education and sensitization of citizens regarding road safety.

<https://gidvial001.000webhostapp.com/#CALIFAX>

A website was designed and implemented using HTML, CSS3, and JAVASCRIPT, this page serves as a means of downloading the apps and in turn provides information about them.

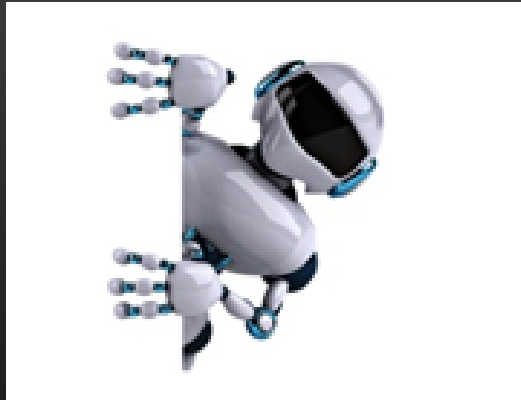

GID VIAL

GID VIAL

It is an Interactive Digital Guide, created with the aim of providing information related to road mobility.

It has four tools: Map, Roles of transit, Games Notice gid.

It is an application, created with the objective of providing the most fundamental information for the use of public roads; this information focuses on the use of traffic lights in traffic signs.

It has some mobility tips and direct access to emergency numbers.

Our purpose is to contribute to the education of responsible citizens and road users and to reduce traffic accidents that has become a worldwide public health problem. "It depends on everyone"

App developed in thukable

“BEING DISINFORMED IS
OUR GREATEST DANGER
ON THE ROAD”
